## SUMMARY

Experienced AI Engineer and Data Scientist with over four years of expertise in data analytics, machine learning, and statistical modeling, proficient in Python, SQL, and AI technologies. Skilled in applying advanced data science techniques to foster business growth and enhance operational efficiency across healthcare, retail, and technology sectors. Committed to transforming complex data sets into actionable insights and innovative solutions.

## WORK EXPERIENCE

### CNTXT | Forward Deployed Engineer | Reem Island, Abu Dhabi, UAE

February 2026 – Present

- Designed and deployed enterprise-grade end-to-end business AI solutions for clients, specialising in AI-driven automation and voice agent development.
- Led forward deployment engagements, working directly with enterprise clients to scope, build, and deliver custom AI-powered voice agents and workflows tailored to operational needs.
- Owned the full QA lifecycle for the voice platform, including feature testing, regression testing, and API testing to ensure production stability.
- Developed and executed comprehensive test plans covering functional, integration, and end-to-end test scenarios, achieving high defect detection rates prior to release.
- Collaborated cross-functionally with product and engineering teams to triage and resolve client-reported incidents rapidly.
- Technologies: Python, Javascript, Claude, OpenAI, MCP, Claude Skills, Livekit, Datadog, FastAPI, LangChain,, LLM, Prompt Engineering, Automation, Postman, API Testing, Git, Jira.

### CNTXT | AI Engineer | Dubai, UAE

October 2024 – February 2026

#### Project: Agntix – AI-driven voice and chat agent platform

- Designed and deployed 15+ LLM-integrated automation agents, reducing client operational costs by 20–35%.
- Engineered CRM integrations and automated workflows within custom agents, reducing manual intervention by 50%.
- Developed a POC using OpenAI real-time for speech-to-speech document interaction, reducing document review time by 60%.
- Trained and fine-tuned in-house LLM and voice models to enhance agent responsiveness and contextual understanding, reducing API dependency and latency by 30%.
- Conducted comparative benchmarking of 7+ PDF extraction tools, delivering a ranked leaderboard that improved parser selection accuracy by 50% for AI knowledge ingestion.
- Executed 30+ feature tests, 60+ API tests, and 10+ end-to-end tests, achieving 95% defect detection before release.
- Utilized Datadog for observability in production, monitoring system health, debugging platform issues, and resolving client-reported incidents.
- Technologies: Python, JavaScript, FastAPI, LangChain, OpenAI, LLM, Prompt Engineering, Automation, Postman, Cypress, Zephyr, Git, Jira.

#### Project: DocEngine – AI-driven legal document generation platform

- Redesigned RFP prompt templates based on real-world samples, improving AI-generated document accuracy and relevance by 25%.
- Refactored codebase to improve readability, maintainability, and reusability, enabling faster onboarding and future development.
- Developed Large Language Model-powered features: dynamic section creation, 'Ask AI' explanations, and document/section summarization—cutting drafting time by 40%.
- Built a benchmarking repository to evaluate AI document outputs via cosine similarity, sentence transformers, and LLM-based scoring, increasing evaluation efficiency by 40%.
- Scraped and documented 50+ contract templates from open-source legal platforms, expanding AI prompt coverage by 35%.
- Technologies: Python, FastAPI, LangChain, OpenAI, LLM, Prompt Engineering, System Engineering.

### Pendium Health | Research and Development Associate | Toronto, Ontario

January 2023 – December 2023

- Engineered and refined data pipelines for efficient preprocessing and storage by extracting data from public APIs, transforming, and optimizing it for storage in a vector database (Pinecone), expanding the database by 40% in two months.
- Enhanced chat functionalities using retrieval-augmented generation techniques, increasing efficiency by 25%.
- Developed a software feature that generates detailed consumer information during medication prescription, enhancing client interactions and increasing customer engagement by 35%.
- Technologies: Python, Numpy, Pandas, Git, Langchain, OpenAI, Pinecone, LLM.

### Cargo Mate | Data Analyst | Jeddah, Saudi Arabia (Remote)

October 2021 – October 2022

- Managed data collection and analysis, maintaining 99% uptime for SQL Server Databases and optimizing performance.
- Streamlined data integration processes without comprising data security, saving over 8 hours per week.
- Produced data visualizations to enhance stakeholder communication using Google Data Studio.
- Technologies: MS SQL, BigQuery, GCP, Google Sheets, Google Data Studio.

## TECHNICAL SKILLS

---

- **AI & Machine Learning Systems:** LLMs, OpenAI, Claude, LangChain, Livekit, Prompt Engineering, Machine Learning, Deep Learning, NLP, Pinecone, TensorFlow, PyTorch, YOLOv8.
- **Software Development & Automation:** Python, JavaScript, SQL, MCP, FastAPI, Postman, Datadog, Cypress, Zephyr, Automation, API Testing, System Engineering.
- **Data Platforms & Tools:** Google Cloud Platform, Data Management, ETL, Tableau, Datadog, Git, Jira.

## EDUCATION

---

### George Brown College

**January 2023 - December 2023**

#### Post-Graduate Certification: Applied AI Solutions Development, GPA: 3.8

Toronto, Ontario

- Honored on the Dean's List for outstanding academic performance in both semesters.

### Visvesvaraya Technological University

**August 2017 - March 2022**

#### Bachelor of Engineering: Computer Science, GPA: 3.2

Bangalore, India

## PROJECTS

---

### DocTalk

**October 2024 – December 2024**

- Developed a proof of concept enabling real-time voice-based interaction with uploaded documents using OpenAI's Realtime API.
- Engineered a speech-to-speech conversational system integrating document parsing, context retention, and AI-driven summarization.
- Deployed the solution within the Agtix ecosystem, reducing document review and comprehension time by 60%.
- Technologies: OpenAI Realtime API, FastAPI, LangChain, Python.

### FireWatch AI

**August 2023 – October 2023**

- Developed a smoke detection system using computer vision model (YOLOv8) based on CCTV monitoring and drone imagery.
- Curated a large dataset of over 10,000 annotated images, ensuring high data integrity for optimal model training.
- Technologies: Modelling, YOLOv8, Python, Roboflow.

### Snap Detect

**July 2023 – September 2023**

- Designed an AI-driven application to simplify the sale of household items during relocations by finetuning YOLOv8 object detection model.
- Processed 1,000 annotated images to refine detection capabilities.
- Technologies: YOLOv8, Google Collab, CVAT, Python.

### Employee Future Prediction

**January 2023 – February 2023**

- Developed a machine learning model that predicts employee turnover based on critical factors to improve employee retention.
- Curated dataset of a company comprising of 4500 individuals.
- Technologies: Data Modeling, Google Collab, Python, Pandas, Numpy, Scikit Learn.
